

## INDEX

## A

Accumulation 4, 6. *See also* General balance equation  
 and purge in recycle loops 103  
 energy balance 124  
 material balance 76  
 non-process elements 103  
 recycle material balance 103, 107, 108  
 unsteady-state M&E balance 188

Activity 31, 41-42

Actual conversion. *See* Conversion

Adiabatic  
 batch equilibrium reactor 168  
 flame temperature 142, 162  
 flash separation, example calculation 170  
 process  
 energy balance 137  
 pumping, heating & decomposing water 133  
 silver-zinc battery 128  
 simultaneous M&E balance 178  
 work (power) in compression/expansion 136

Adsorption isotherm 36

Albedo 201

Amagat's law 26

Ammonia production 178

Ammonium nitrate  
 conceptual flowsheet and stream table 70

Antibiotic production 112

Antoine equation 33-35  
 Antoine constants (table) 33  
 example calculation  
 bubble-point & dew-point 36  
 Raoult's law 34  
 vapour pressure 27

## Atmosphere

example calculation  
 Earth, carbon cycle 118  
 Earth, carbon dioxide balance 80  
 global warming 198  
 pressure equivalents (table) 25

Atom balance  
 combustion reaction 120, 140, 161  
 example calculation  
 biochemical process 112  
 direct methanol fuel cell 13  
 environmental process 118  
 thermal power generation process 161  
 water vapour from jet engine 15

general balance equation 6

## B

Batch process. *See* Closed system

Batch reactor  
 energy balance, electric battery 128  
 material balance 78  
 simultaneous M&E balance 168  
 unsteady-state M&E balance 193

Battery 128, 136

Biochemical process 1  
 example calculation  
 M&E balance 157  
 material balance 112

Biological system 188

Biomass  
 global warming 198  
 heat of combustion 140  
 to ethanol, carbon cycle 118

Bubble-point (& dew-point) 35-36

## C

Capital cost. *See* Process economics

Carbon cycle. *See* Carbon dioxide

## Carbon dioxide

carbon cycle, atmosphere of Earth 198  
 carbon cycle, ethanol from biomass 118  
 global warming/greenhouse effect 198  
 material balance  
 atmosphere of Earth 80, 118, 199  
 direct methanol fuel cell 13  
 internal combustion engine 7  
 space station 79

Chemical process 1, 2, 131-133, 163, 188

Chemical process flowsheet. *See* Flowsheet

Chemical reaction  
 conversion, extent, selectivity & yield 39, 92  
 energy balance 135, 142, 153  
 equilibrium constant 41  
 equilibrium vs actual conversion 42, 43  
 homogeneous vs heterogeneous 52  
 material balance 43, 88, 92  
 reaction rate (kinetics) 42-43, 92  
 simultaneous M&E balance 168  
 stoichiometry & limiting reactant 38

Chemical reactor. *See* Reactor

Circular reference (spreadsheet) 110

Climate change 1  
 greenhouse effect, differential M&E balance 198  
 water vapour from jet engine 14

Closed system 9, 77, 125, 190  
 example calculation  
 energy balance 126-128, 192  
 M&E balance 193  
 material balance 78, 191  
 simultaneous M&E balance 167-168

Closure 93, 138  
 iteration of recycle M&E balance 103, 110, 142

Combustion 7, 14, 120, 140-141, 161, 198

Component. *See* Phase rule

Composition 68. *See also* concentration

Compound reference state. *See* Reference state

Compressibility factor 29

Compression of gas 135-136
